Intelligence-Driven Risk Assessment Report

ENTITY ID:	22	REPORT DATE:	2026-03-04 09:38
SECURITY:	CONFIDENTIAL	GENERATED BY:	ACRAS AGENTIC ENGINE

Executive Credit Risk Assessment

1. Executive Summary

The profile of Company ID 22 is moderately healthy but faces some significant risks. The current financial metrics, combined with qualitative insights, suggest that the company is at risk but not severely so. The ML model predicts a low Probability of Default (PD) of 6.33%, indicating a low risk of default. However, key qualitative concerns such as the high debt-to-equity ratio, the high mora ratio, and the bureau score below 650 require close attention. Overall, while the quantitative risk assessment is favorable, the qualitative indicators suggest that the company is more fragile and requires monitoring.

2. Liquidity and Solvency Analysis

- Current Ratio:** 2.42 | **Risk Rating:** Moderate

The current ratio of 2.42 indicates that the company has \$2.42 of current assets for every \$1 of current liabilities. While this is a healthy ratio, the high utilization of trade credit (75.84%) suggests a reliance on suppliers for working capital, which could be risky if suppliers tighten their credit terms.

Debt-to-Equity: 2.21 | **Risk Rating:** High

- The debt-to-equity ratio of 2.21 suggests that for every dollar of equity, the company has \$2.21 of debt. This ratio is relatively high, indicating a significant reliance on debt financing. While not immediately concerning, high levels of debt can increase financial risk, especially if interest costs rise or if the company faces operational difficulties.

3. Creditworthiness & Market Context

- Bureau Score:** 594.098 | **Standing:** Below average

The bureau score of 594.098 is below average and indicates some credit risk. Credit scores typically range from 300 to 850, with scores above 650 considered good. A score of 594 suggests that the company may have a history of late payments or other credit issues, which could be a red flag.

Mora Ratio (Delinquency): 0.2884 | **Delinquency Risk:** Medium

The mora ratio of 0.2884 indicates that about 28.84% of the company's receivables are delinquent. This is not an extremely high percentage but still suggests that there are some late payments, which could indicate cash flow issues or potential creditworthiness problems.

Sector Risk Score: 0.897 | **Sector Risk:** High

- The sector risk score of 0.897 is relatively high, indicating that the company operates in a sector with higher-than-average risk. This could be due to industry-specific challenges such as intense competition, regulatory changes, or economic fluctuations. Thus, while not the most critical red flag, it adds to the overall risk profile.

4. Key Performance Indicators (KPIs)

Financial Metric	Reported Value	Risk Assessment
Current Ratio	2.42	Moderate
Debt-to-Equity	2.21	High
Revenue Growth	0.0803	Low
EBITDA Margin	0.0367	Low
Bureau Score	594.098	Below average
Mora Ratio	0.2884	Medium

5. Quantitative Risk Analysis (ML Engine)

- **Inferred PD:** 6.33%
- **Risk Tier:** Low
- **Qualitative Insight:** The ML model predicts a low Probability of Default (PD) of 6.33%, indicating a low risk of default. Despite the low PD, the qualitative risk indicators—such as the high debt-to-equity ratio, the high mora ratio, and the bureau score below 650—are still significant. The model's low PD is balanced by the strong liquidity position, as indicated by the current ratio of 2.42. However, the high debt-to-equity ratio and the high mora ratio suggest that the company's financial health is fragile and requires ongoing monitoring. The current financial position is favorable, but the qualitative risks indicate that more attention is needed to ensure long-term stability.

6. Final Directive & Conclusion

Official Recommendation: REVIEW

Core Rationale: The company has a favorable quantitative risk profile with a low PD of 6.33%, but the qualitative risks (high debt-to-equity ratio, high mora ratio, and bureau score) are significant and require close monitoring. The current financial health indicators are strong, but the company still faces considerable risk due to its high reliance on debt and potential cash flow issues.

Executive Summary/Closing: While the company's financial position is not entirely dire, it is advisable to closely monitor the qualitative risks to ensure long-term stability. The company should address its high debt levels and improve its credit behavior to mitigate potential risks.

Final Risk Score: 58 / 100

The company is moderately healthy but requires ongoing monitoring and management of key risk factors.
