Intelligence-Driven Risk Assessment Report

ENTITY ID:	59	REPORT DATE:	2026-03-05 21:27
SECURITY:	CONFIDENTIAL	GENERATED BY:	ACRAS AGENTIC ENGINE

Executive Credit Risk Assessment

1. Executive Summary

The profile of Company ID 59 is largely healthy, supported by strong financial indicators such as a robust Current Ratio and a moderate Debt-to-Equity ratio. However, the high Mora Ratio and low Bureau Score indicate potential credit behavior issues. The ML model has assessed a remarkably low Probability of Default (0.0%), which is consistent with the strong liquidity and financial health metrics. Overall, the company's financial stability appears to be robust, making the profile acceptable for investment or credit extension.

2. Liquidity and Solvency Analysis

Liquidity

- **Current Ratio:** 2.18
- This indicates a strong ability to cover short-term obligations, with \$2.18 in current assets for every dollar of current liabilities. This is a positive sign for short-term solvency.
- **Caja (Cash):** 161,026.55
- A healthy cash position further supports the company's liquidity, providing a buffer to meet immediate financial needs.

Solvency

- **Debt-to-Equity:** 1.59
- This ratio suggests moderate financial leverage, with \$1.59 in debt for every dollar of equity. While not excessive, it indicates some level of financial risk, particularly if interest rates rise or the company's cash flow diminishes.
- **EBITDA Margin:** 6.00%
- The EBITDA Margin, while modest, indicates that the company is generating a healthy level of operating income, which is crucial for covering interest and debt obligations.
- **Revenue Growth:** 3.92%
- Moderate revenue growth suggests the company is growing steadily, which is a positive sign for long-term solvency.

3. Creditworthiness & Market Context

Credit Standing

- **Bureau Score:** 593.87
- A low Bureau Score indicates poor historical credit behavior, highlighting potential future delinquency risks.
- **Mora Ratio:** 21.47%
- The high Mora Ratio is a significant red flag, indicating a high likelihood of past or current delinquencies, which can impact the company's creditworthiness.
- **Sector Risk Score:** 0.8488
- The company operates in a high-risk sector, which can exacerbate existing credit behavior issues and financial vulnerabilities.

4. Key Performance Indicators (KPIs)

Financial Metric	Reported Value	Risk Assessment
Current Ratio	2.18	Low
Debt-to-Equity	1.59	Medium
Revenue Growth	3.92%	Medium-High
EBITDA Margin	6.00%	Medium
Bureau Score	593.87	Low
Mora Ratio	21.47%	High

5. Quantitative Risk Analysis (ML Engine)

Inferred PD: 0.0% | **Risk Tier:** Low

Qualitative Insight:

The ML model's assessment of a Probability of Default (PD) of 0.0% and a 'Low' Risk Tier aligns with the company's strong financial health indicators, particularly its robust Current Ratio and healthy cash position. The ML model likely considers the company's overall financial stability, including its positive EBITDA Margin and moderate Debt-to-Equity ratio, as primary factors. However, the high Mora Ratio and low Bureau Score highlight significant credit behavior concerns that may impact future performance. The ML model's

predictability is supported by the company's strong liquidity, which can mitigate the risks associated with past delinquencies. Despite these concerns, the company's financial stability appears to be robust.

6. Final Directive & Conclusion

Official Recommendation: APPROVE

Core Rationale: The company's strong Current Ratio and healthy cash position support its short-term solvency, and the ML model's low PD indicates a low risk of default. However, the high Mora Ratio and low Bureau Score suggest potential credit behavior issues that should be monitored closely. Therefore, the recommendation is to approve with conditions, including enhanced monitoring of credit behavior and adherence to financial covenants.

Executive Summary/Closing: Company ID 59 presents a favorable risk profile, supported by strong liquidity and financial health. While there are credit behavior concerns, the overall financial stability is robust, making the company a good credit candidate.

FINAL RISK SCORE: 75

This score reflects the company's strong liquidity and financial health, balanced against the credit behavior issues indicated by the Mora Ratio and low Bureau Score.
