Intelligence-Driven Risk Assessment Report

ENTITY ID:	1090	REPORT DATE:	2026-05-13 15:51
SECURITY:	CONFIDENTIAL	GENERATED BY:	ACRAS AGENTIC ENGINE

Executive Credit Risk Assessment

1. Executive Summary

The report for Company ID 1090 presents a fragile financial condition with multiple red flags. The primary concerns are evident in its extremely low current ratio, high debt-to-equity ratio, and high mora ratio. The combined effect of these metrics, along with the low bureau score and negative revenue growth, indicates severe liquidity and solvency issues. Based on the ML engine's inferred Probability of Default (PD) of 39.34%, which is moderately high, and the sector risk score of 4.000, our assessment deems the company's profile as fragile. Therefore, we recommend a thorough review of the company's financial health and operational strategies before making any decisions.

2. Liquidity and Solvency Analysis

Current Ratio

The current ratio of 0.318 is significantly lower than the industry average of approximately 1. This indicates a high risk of liquidity issues, as the company has less than one dollar of current assets for every dollar of current liabilities. This may lead to difficulties in meeting short-term obligations and could signal potential solvency problems.

Debt-to-Equity

The debt-to-equity ratio of 1.882 suggests that the company is highly leveraged, with every dollar of equity backed by nearly two dollars of debt. This high level of financial leverage increases the risk of insolvency if the company's earnings decline or if interest rates rise, as the company will have to pay higher interest expenses.

3. Creditworthiness & Market Context

Bureau Score

The bureau score of 346 is very low, indicating a high level of credit risk. This score reflects a history of poor credit behavior, such as late payments or defaults. This low score amplifies the risk of the company's ability to meet its financial obligations.

Mora Ratio (Delinquency)

The mora ratio of 0.463 is quite high, suggesting that the company has a significant proportion of its accounts past due. This indicates a high risk of non-payment and potential default, which could lead to financial distress and liquidity problems.

Sector Risk Score

A sector risk score of 4.000 is high, indicating that the company operates in a sector with high levels of risk. This could be due to economic downturns, regulatory changes, or other external factors that may negatively impact the company's operations.

4. Key Performance Indicators (KPIs)

Financial Metric	Reported Value	Risk Assessment
Current Ratio	0.318	High
Debt-to-Equity	1.882	High
Revenue Growth	-0.096	High
EBITDA Margin	0.079	Medium
Bureau Score	346	High
Mora Ratio	0.463	High

5. Quantitative Risk Analysis (ML Engine)

Inferred PD: 39.34% | **Risk Tier:** Medium

Qualitative Insight: The ML model's inferred Probability of Default (PD) of 39.34% is moderately high, reflecting a medium level of risk. This is predominantly driven by the low current ratio and high debt-to-equity ratio, which point to severe liquidity and solvency concerns. The high mora ratio and low bureau score further corroborate the company's credit risk, indicating a high likelihood of non-payment and potential default. These factors are consistent with the findings from the analyst's deep dive, reinforcing the need for a comprehensive review of the company's financial health and operational strategies. The current ratio of 0.318 and debt-to-equity ratio of 1.882 are particularly alarming, as they suggest the company is vulnerable to short-term and long-term financial distress if it fails to improve its liquidity and reduce its leverage.

6. Final Directive & Conclusion

Official Recommendation: REVIEW

Core Rationale: The single most important deciding factor is the extremely low current ratio and high debt-to-equity ratio, which indicate severe liquidity and solvency issues. These factors, along with the high

mora ratio and low bureau score, present a high risk of non-payment and potential default.

Executive Summary/Closing: The current assessment of Company ID 1090 highlights significant financial risks that necessitate a thorough review. The company's profile is fragile and requires immediate attention to mitigate potential financial distress and operational challenges. We recommend a detailed analysis of the company's financial strategies and operational efficiencies to address these risks and improve its creditworthiness.

SYSTEM FINAL RISK SCORE: 85

SYSTEM RISK ADVISORY (DETERMINISTIC)

- [CRITICAL] Mora Ratio is 46.3%. Threshold for HIGH risk is 20%.
- [CRITICAL] Current Ratio is 0.32. Threshold for HIGH risk is 0.50.
